Bird Conservation Nepal

Established in 1982, Bird Conservation Nepal (BCN) is the leading organization in Nepal, focusing on the conservation of birds, their habitats, and sites. It seeks to promote interest in birds amongst the general public, encourage research on birds and identify major threats to birds' continued survival. As a result, we are the foremost scientific authority providing accurate information on birds and their habitats throughout Nepal. We provide scientific data and expertise on birds for the Government of Nepal through the Department of National Parks and Wildlife Conservation (DNPWC) and work closely in birds and biodiversity conservation throughout the country.

BCN is a membership-based organization with a founder president, patrons, life members, friends of BCN, and several supporters. Our membership provides strength to the society and is drawn from people from all walks of life from students, professionals, and conservationists. Our members act collectively to set the organization's strategic agenda.

We are committed to showing the value of birds and their special relationship with people. As such, we strongly advocate the need for peoples' participation as future stewards to attain longterm conservation goals.

As the Nepalese Partner of BirdLife International, a network of more than 121 organizations around the world, BCN also works on a worldwide agenda to conserve the world's birds and their habitats.

Department of National Parks and Wildlife Conservation

Following the National Parks and Wildlife Conservation Act, of 1973; the Department of National Parks and Wildlife Conservation (DNPWC) has been playing a leading role to conserve the nation's biodiversity. The DNPWC roles are over increasing along with the paradigm shift from species conservation approach to landscape-level approach in the recent days. The DNPWC conserved wildlife with a network of 12 National Parks, 1 Wildlife Reserve, 6 Conservation Areas, 1 Hunting Reserve, and 13 Buffer Zones. The protected area network covers 34,419.75 km2 (23.39%) of the country's geographical area.

In comparison to its size, Nepal is extremely rich in biodiversity. With less than 1% of the world's landmass, the country is endowed with 2.7% flowering plant species, 4.5% of mammal species, 9% of bird species, and 2.6% of butterfly and moth species of the world. Altitudinal variation within a short span ranging from 60m to 8848m causes the existence of 118 types of ecosystem, 75 types of vegetation, and 35 types of forest in the country. Along with Nation's biodiversity conservation, DNPWC works as a focal institution; for example Ramsar Convention, The World Heritage Convention (UNESCO), the International Union for Conservation of Nature (IUCN), the Global Tiger Forum (TGF), Convention on Biodiversity and the program of Work on Protected Areas (PoWPA). This department is the management authority for the fauna under the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) provision. Two National Parks have been enlisted as the World Heritage Sites under the natural category: Sagarmatha (Mt. Everest) National Park and Chitwan National Park in 1979 and 1984 respectively. A total of 10 Wetland Sites in the country have been designated as Wetland of International Importance (Ramsar Sites). Of them 6 Ramsar Sites fall under the protected Areas network viz: Rara Lake, Phoksundo Lake, Gosaikunda and associated lakes, Gokyo and associated Lake, Bis Hazari Lake and Koshi Tappu Wildlife Reserve and 4 Ramsar Sites i.e. Maipokhari, Ghodaghodi Lake and Japadishour Reservoir and Lake Cluster of Pokhara Valley is outside the Protected Areas.

GOAL

The overall goal of the Department is to conserve wildlife and outstanding landscape having ecological importance for the well-being of people.

IC OBJECTIVES

The specific objectives of the Department are:

- To conserve rare and endangered wildlife including flora and faunal diversity by maintaining representative ecosystems
- · To conserve and manage outstanding landscapes of ecological importance
- To support the livelihood of local people through buffer zone and conservation areas management programs
- To promote ecotourism consistent with biodiversity conservation.
